
PROFILE

A Software Engineer and multi-disciplinary Game Developer pursuing career opportunities that provide meaningful contributions to potential employers.

EDUCATION

University of California Berkeley

May 2021

Bachelor of Arts, Computer Science with a minor in Art Practice

Data Structures, AI, Machine Structures, Graphics, Internet Architecture,

Database Systems, Animation, Art Studios (Drawing, Painting, Printmaking),

3D Animation (Storyboarding, design, modeling, animation, VFX, rendering and compositing)

EXPERIENCE

Associate Software Engineer, WB Games, San Francisco, CA

2021-2025

Cancelled DC Project: Initially worked on a cancelled DC project doing back-end bugfixing and support for new gameplay iterations using Unity and Hydra

Rapid Prototyping: Client and server gameplay implementation for a scrapped physics-based game prototype in Unreal Engine.

Work on DC Worlds Collide: Assisted in overhauling server architecture for an existing mobile game. Independently brought multiple major features back online using Hydra, an in-house gaming back-end. Created fixes for both server-side and client-side bugs, including later patches for the live game. Implemented handlers and unit tests for server requests. Alongside engineering work, worked as a reserve Technical Artist, implementing new characters and items from art assets and creating bespoke editor tools to address bottlenecks in artist productivity.

Essential skills developed: Rapid prototyping, Jenkins build process, Unity debugging, Unity tool creation, Hydra cloud services, advanced Unity P4 integration, Git, SSC deployment

Technical Intern III, The Aerospace Corporation, El Segundo, CA

Summer of 2019

Unity Application: Created reactive animated GUI elements, used Cinemachine plugin for smooth camera transitions, assisted in solidifying artstyle, merged scenes, created a server GUI using JSON to save user preferences.

Concept Work: Researched scanning patterns, created realistic concepts for satellite optics demonstration application (using Blender's Cycles render engine with advanced node-based materials), fleshed out and created design docs for application GUI.

VOIP Software: Conducted user interviews on an operations center; prototyped a VoIP web app using DeepSpeech and Docker.

Game Engineer Intern, WB Games, San Francisco, CA

Summer of 2018

Assisted in implementing new features in a yet to be announced mobile game developed in Unity. Created, documented, and presented a system for automated smoke testing using Airtest, RPCs, APIs, client/server communication. Documented and fixed server-side and client-side bugs.

Associate Software Development Intern, Logmein Inc, Goleta, CA

Summer of 2017

Used Java to create unit tests for Android apps. Integrated Mockito and Jmockit into unit tests. Implemented bug fixes and pushed them into the product (GoToWebinar for Android) using Git.

Summer Intern, Neal Feay Company, Goleta, CA

Summer of 2016

Used CNCs/mills/graphics tools. Helped design the pattern for a custom staircase for a yacht. Created an artist's rendering of a storefront sculpture.

Independent Projects jrandmaa.github.io

2013-2020

Indie Game Development:

Experimental open-world game using level-streaming, GPU-instanced foliage and procedural terrain/sky shaders.

In-progress FPS engine with a focus on player movement and character/world interactivity.

iOS App Development: "Twist", gyro controls and Admob, using Xcode, Illustrator, GIMP.

3D modeling: Using Blender, 3DS Max and other tools, created, textured, rigged, and animated 3D models.

Arduino Programming: Made a proximity sensor and a robotic arm with an Arduino Uno.

Parser: Created a parser to read JSON and XML files for a project using Unity.

SKILLS

SW Development: Java, C/C++/C#, Python, HTML5, Javascript, Typescript, CSS, XML, JSON, Swift, Lua

Tools: Git, Perforce, Mockito, Jmockit, Confluence, Jira, Lucidchart, Visual Studio, IntelliJ, Xcode

Applications: Unity, Blender, Maya, 3DS Max, Houdini, Substance Painter, SOLIDWORKS, Illustrator, Photoshop, GIMP, CorelDRAW, Google Docs, MS Office

Hardware: 3D printers, laser cutters, lathes, mills, CNCs, soldering, simple circuit design

Operating Systems: Experienced PC and Mac user. Familiar with Linux shell.

Art Experience: Graphic design, 3D modeling, mesh skinning, weight painting, 3D and 2D animation, game and film VFX, character, set, and sound design.
